## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-15, drawn to method for compensating electricity meter measuring current or voltage, classified in class 702, subclass 60.
- II. Claims 16-26, drawn to apparatus for use in an electricity meter, classified in class 702, subclass 60.
- III. Claims 27-36, drawn to method for compensating electricity meter by multiplying with a dynamic compensation factor, classified in class 702, subclass 60.

Inventions I and III are related to invention II as processes and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus may practice either of the claimed methods of inventions I or III.

Inventions III and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the

particulars of the subcombination as claimed because the measurement of voltage or current is not specified in the combination using a dynamic compensation factor. The subcombination has separate utility such as measurement of electricity use under relatively constant demand.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II or III, restriction for examination purposes as indicated is proper.
